

# KILDARE B VILLAGE FACT SHEET 2014

This “Fact Sheet” provides basic information on population changes and demographics for Kildare B village. All statistics have been produced from household data collected by fieldworkers from the MRC/Wits Rural Public Health and Health Transitions Research Unit (Agincourt) and collaborating researchers. Ask the Agincourt LINC (learning, Information dissemination and Networking with the Community) team for more information if needed. There is a fact sheet for each village that is a part of the Agincourt Health and Socio-Demographic Surveillance System (AHDSS) site. The CDF (Community Development Forum) members of each village will each have the fact sheet, the fact sheet is on the website <http://www.agincourt.co.za/index.php/activities/linc/> and you can get it from the LINC office in Agincourt village. The figures provided indicate the trends that are taking place in your village. They can be used to motivate for community development projects and to predict future growth and needs. Whenever you use this information, please reference it as being obtained from MRC/Wits Rural Public Health and Health Transitions Research Unit (Agincourt).

*Villages in the Agincourt Health and Socio-Demographic Surveillance (HDSS) System Research Site in 2014 include:*

Agincourt, Belfast, Croquet Lawn, Croquet Lawn B, Cunningmore A, Cunningmore B, Dumphries A, Dumphries B, Dumphries C, Huntington, Ireagh A, Ireagh B, Ireagh C, Justicia, Khaya Lami, Kildare A, Kildare B, Kumani, Lillydale A, Lillydale B, Makaringe, MP Stream, Newington B, Newington C, Rolle C, Somerset, Somerset C, and Xanthia.

## 1. DEMOGRAPHIC DATA

Demography is the study of human settlements and populations and how they change. Populations change because people are born, they die, they move in and out. This fact sheet will look at births, deaths and migrations of people in and out of Kildare B village. It will also do some comparisons between what is happening in Kildare B and what is happening in the rest of the Agincourt Health and Demographic Surveillance System (HDSS) research site. Smaller places (like villages) show trends that do not always show large change, especially in short time periods. Changes from year to year may be just random fluctuations.

## 1.1 Village Growth and Population over the Period 1994 – 2014

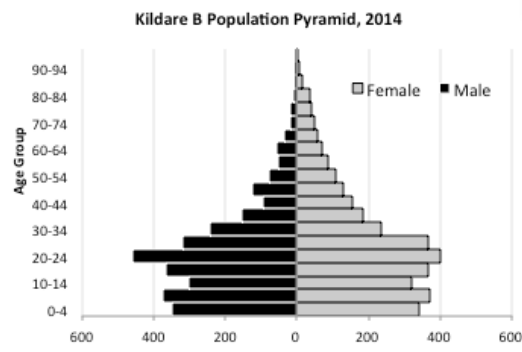

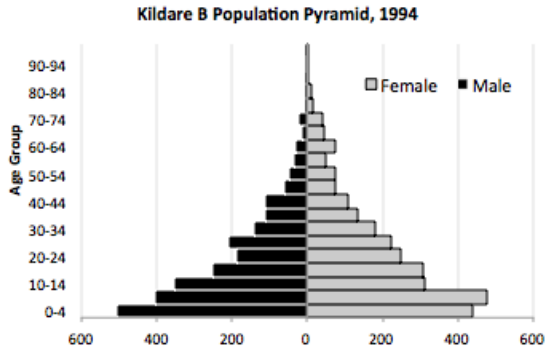

The numbers shown in **Table 1.1** are calculated according to numbers for the end of June 2014. The numbers are known as mid-year population figures.

	1994	2012	2013	2014
<b>Households</b>	783	1 073	1 086	1 106
<b>Population</b>	5 315	6 160	6 249	6 396
<b>Male</b>	2 504	2 960	3 008	3 065
<b>Female</b>	2 811	3 200	3 241	3 331
<b>Children under 5</b>	945	697	704	690
<b>Children of school-going age (5-19)</b>	2 095	2 164	2 122	2 098

**Table 1.2** shows how many people were living in Kildare B village of different ages in June 2014.

Age Group	2014		
	Male	Female	Total
<b>0-4</b>	349	341	690
<b>5-9</b>	373	368	741
<b>10-14</b>	302	321	623
<b>15-19</b>	367	367	734
<b>20-24</b>	458	398	856
<b>25-29</b>	318	365	683
<b>30-34</b>	242	234	476
<b>35-39</b>	156	183	339
<b>40-44</b>	97	154	251
<b>45-49</b>	124	131	255
<b>50-54</b>	79	106	185
<b>55-59</b>	52	88	140
<b>60-64</b>	59	71	130
<b>65-69</b>	34	57	91
<b>70-74</b>	17	47	64
<b>75-79</b>	20	41	61
<b>80-84</b>	10	35	45
<b>85-89</b>	4	16	20
<b>90-94</b>	4	6	10
<b>95+</b>	0	2	2
<b>Total</b>	3 065	3 331	6 396

You can compare the population structure between Kildare B village and the Agincourt HDSS research site (1994 and 2014) by looking at the population pyramids. These pyramids are in **Figures 1.1, 1.2, 1.3 and 1.4** (page 3).

**Take home message:** The number of households in Kildare B village has increased a lot since 1994. The population has also grown between the years of 1994 and 2014. The population structure of Kildare B village loosely follows the structure of the Agincourt HDSS research site.

## 1.2 Births

### 1.2.1 Number of Births by Gender

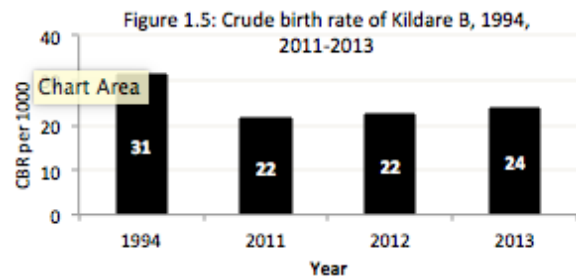

The number of births recorded in Kildare B village is shown in **Table 1.3** below. We can only provide data to the end of 2013. We compared the birth trends in Kildare B village with the rest of the Agincourt HDSS research site in **Figures 1.5** and **1.6**.

	1994	2011	2012	2013
Male Births	80	65	64	75
Female Births	86	66	73	75
Total Births	166	131	137	150

The numbers of births show an upward trend in Kildare B village. In 2013 there was an increase in the number of births, but there were not as many as in 1994.

### 1.2.2 Crude Birth Rate

**Figure 1.5** shows the crude birth rate in Kildare B village from 1994 to 2013. **Figure 1.6** shows the crude birth rates in the Agincourt HDSS research site from 1994 to 2013.

The crude birth rate is found by comparing the number of babies born to the total population. For example, in **Figure 1.5** above, for every 1000 people living in Kildare B village in the year 2013, 24 babies were born.

When you compare the crude birth rates in Kildare B village with the crude birth rate for the whole of the Agincourt HDSS research site, they are relatively similar. One difference is that Kildare B had many more births than Agincourt HDSS in 1994.

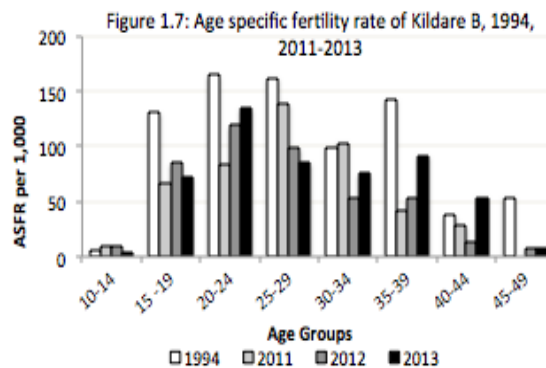

### 1.2.3 Births by Mother's Age and Age Specific Fertility Rates

Research within the Agincourt HDSS research site continues to look closely at fertility.

**Table 1.4** shows you the number of babies born to mothers of different ages in Kildare B village.

<b>Table 1.4: Births by Age group in Kildare B, 1994, 2011-2013</b>				
Age Groups	1994	2011	2012	2013
10-14	2	3	3	1
15 -19	40	27	34	29
20-24	41	33	45	50
25-29	36	38	30	28
30-34	18	19	11	17
35-39	19	7	9	16
40-44	4	4	2	8
45-49	4	0	1	1
<b>Total Births</b>	<b>164</b>	<b>131</b>	<b>135</b>	<b>150</b>

We can also look at trends across the whole site and compare them with Kildare B village by looking at **Figures 1.7** and **1.8**.

We find the age specific fertility rate by looking at how many women in a certain age group have had babies in a certain year. For example, if we look at **Figure 1.7**, we can see that in the year 2013 in Kildare B village, for every 1000 women ages 15-19, about 60 of them gave birth.

**Take home message:** 2013 saw decreases in fertility in the 15-19 and 25-29 age groups. All other age groups in Kildare B village saw increasing in fertility in the year 2013. The Agincourt HDSS site has seen constant decreases for all age groups since 1994.

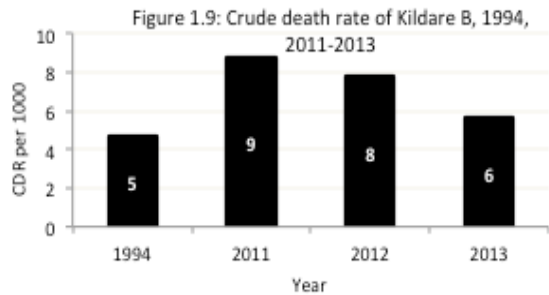

## 1.2 Deaths

### 1.3.1 Deaths

The MRC/Wits Agincourt Unit only gives *numbers* of deaths for each age group in each village, not the *cause* of death. The number of deaths occurring is low and if the cause of death is given, then a person's confidentiality may be broken. **Table 1.5** shows the total number of deaths that occurred in Kildare B village in 1994 and from 2011 through to 2013.

	1994	2011	2012	2013
<b>Male Deaths</b>	18	25	20	20
<b>Female Deaths</b>	7	28	28	15
<b>Total Deaths</b>	25	53	48	35

**Figures 1.9** and **1.10** show crude death rates over the same period in Kildare B village and across the Agincourt HDSS research site.

The crude death rate is found by looking at how many people died for every 1000 people living in the population. For example, in 2012 for every 1000 people in the population of Kildare B village, 8 died.

The data shows that the crude death rate has increased greatly from the levels seen in 1994, across the whole population of the Agincourt HDSS research site. However, there is a suggestion that the death rate may be falling. We need to carry on watching these figures to see if this is really a trend. We are beginning to think that there really is a downward trend in death rates, probably because of the increase in ARVs for people with HIV.

### 1.3.2. Main Causes of Death in the Agincourt HDSS Site in different Age Groups

**Table 1.6** shows the top causes of death for different age groups. HIV/AIDS remains the most common causes of death but it is no longer the top cause of death for people who are over 65.

**Table 1.6:** Top Causes of Death in Age Bands, Agincourt HDSS research site, 1994, 2003 and 2014

Age group	1994			2003			2013		
	Total	Top causes of death	#	Total	Top causes of death	#	Total	Top causes of death	#
Under 1	33	Acute respiratory infection including pneumonia	8	83	Acute respiratory infection including pneumonia	25	41	Unknown	6
		Diarrhoeal diseases	6		HIV/AIDS related	15		Acute respiratory infection including pneumonia	4
		Unknown	6		Unknown	11		Neonatal pneumonia	4
		Prematurity	3		Diarrhoeal diseases	10		Diarrhoeal diseases	3
		Birth asphyxia	2		Neonatal pneumonia	5		Malaria	2
1-4	37	Unknown	12	62	HIV/AIDS related	29	26	HIV/AIDS related	6
		HIV/AIDS related	10		Diarrhoeal diseases	9		Acute respiratory infection including pneumonia	4
		Diarrhoeal diseases	6		Acute respiratory infection including pneumonia	6		Malaria	2
		Acute respiratory infection including pneumonia	4		Unknown	6		Diarrhoeal diseases	1
		Road traffic accident	2		Malaria	3		Pulmonary tuberculosis	1
5-19	19	Unknown	4	39	HIV/AIDS related	8	17	Unknown	4
		Assault	3		Unknown	7		Intentional self-harm	2
		HIV/AIDS related	3		Road traffic accident	4		Asthma	2
		Acute respiratory infection including pneumonia	1		Pulmonary tuberculosis	4		Reproductive cancers	1
		Haemorrhagic fever	1		Assault	3		Other infectious diseases	1
20-49	76	Pulmonary tuberculosis	13	335	HIV/AIDS related	128	271	HIV/AIDS related	37
		HIV/AIDS related	12		Pulmonary tuberculosis	102		Pulmonary tuberculosis	34
		Assault	12		Unknown	23		Acute respiratory infection including pneumonia	29
		Road traffic accident	9		Road traffic accident	10		Unknown	17
		Unknown	8		Intentional self-harm	9		Asthma	11
50-64	40	Unknown	8	118	HIV/AIDS related	25	100	Asthma	8
		HIV/AIDS related	5		Pulmonary tuberculosis	25		Cardiac disease	8
		Pulmonary tuberculosis	5		Unknown	20		HIV/AIDS related	6
		Digestive cancers	4		Digestive cancers	7		Acute respiratory infection including pneumonia	6
		Road traffic accident	3		Acute respiratory infection including pneumonia	7		Pulmonary tuberculosis	6
65 & older	101	Unknown	25	165	Unknown	33	163	Cardiac disease	22
		Pulmonary tuberculosis	21		Pulmonary tuberculosis	24		Stroke	20
		Digestive cancers	11		Cardiac disease	15		Pulmonary tuberculosis	12
		Cardiac disease	8		Chronic obstructive pulmonary disease	13		Acute respiratory infection including pneumonia	10
		Stroke	6		Stroke	9		Asthma	8
Total	306			802			618		

- **Other infectious diseases:** Sepsis, malaria, measles, meningitis and encephalitis, tetanus, pulmonary tuberculosis, pertussis and haemorrhagic fever

### 1.3.3 A story of HIV

Figure A shows what percentage of deaths were caused by HIV in various age groups.

Figure A: Changes in percentage of total deaths attributable to HIV 1994-2013

The percentage of deaths due to HIV/AIDS is decreasing in all age groups. However, in Figure B, you can see that in 1994, most deaths were in the 65 and older age group, as can be expected. But in 2003, most of the deaths were in the 20-49 year age group. Despite the decrease in rates of HIV and the decrease in numbers of people dying overall, we still have a lot more work to do to reduce the death rates in the 20-49 year olds.

Figure B: Change in percentage of total deaths attributable to age group 1994-2013 whole Agincourt HDSS

**Take home message:** The total number of deaths in all age groups is decreasing. HIV/AIDS related illnesses continue to be a large cause of death throughout the population. Although, since 1994 the number of deaths due to HIV/AIDS related illnesses has decreased. Other top causes of death in 2013 include pulmonary tuberculosis and different kinds of pneumonia.

## 1.2 MIGRATION

### 1.4.1 Permanent migration patterns

Tables 1.7 and 1.8 describe how many people have moved in to Kildare B village permanently and out of Kildare B village permanently.

Table 1.7: In-Migrants by Gender in Kildare B village, 1994,2012-2014				
	1994	2012	2013	2014
Male In-Migrants	78	124	92	60
Female In-Migrants	118	212	152	91

Table 1.8: Out-Migrants by Gender in Kildare B village, 1994, 2012-2014				
	1994	2012	2013	2014
Male Out-Migrants	127	140	86	53
Female Out-Migrants	181	223	128	73
Total Out-Migrants	308	363	214	126

**Take home message:** The number of people permanently moving in and out of Kildare B village has been decreasing. There were nearly half as many migrations out of Kildare B in 2013 as there were in 2012. It is important to understand how many people are moving in and out of the village.

## 2. SOCIOECONOMIC DATA

### 2.1 Toilets

#### 2.1.1 Location of Toilets

Table 2.1 shows the location of toilets within households in Kildare B Village between 2001,

**Table 2.1: Change in where household toilets are situated in Kildare B village, 2001-2014**

Year	Total households	In House	In Yard	Other House	Bush	Unknown
2001	813	1	533	173	106	0
2007	933	2	655	183	93	0
2014	857	1	780	57	18	1

2007 and 2014.

**Figure 2.1: Change in where households toilets are situated in Kildare B village, 2001-2014**

**Figure 2.2: Change in where households toilets are situated in whole Agincourt HDSS, 2001-2014**

### 2.1.2 Type of Toilets.

Table 2.2 shows the change in the types of toilets being used in Kildare B village.

Table 2.2 Change in type of toilets in Kildare B village, 2001-2014						
Year	Total households	Pit Toilet	None	VIP	Modern	Unknown
2001	813	546	263	3	1	0
2007	933	653	269	8	2	1
2014	857	748	66	42	1	0

Figures 2.5 and 2.6 show the percentage of each type of toilet in Kildare B village and the Agincourt HDSS research site. Data is given for 2001, 2007 and 2014.

**Figure 2.3:** Change in type of toilets in Kildare B village, 2001-2014

**Figure 2.4:** Change in type of toilets in whole Agincourt HDSS, 2001-2014

**Take home message:** The percentage of households with a toilet in Kildare B village reflects that of the Agincourt HDSS research site. The percentage of households with toilets has been going up. More and more households have toilets within the yard of the household. The number of toilets in households in Kildare B village and in Agincourt HDSS research site has been increasing. The percent of pit toilets in Kildare B villages is increasing. The percent of pit toilets in the whole Agincourt HDSS is increasing and the percent of VIP toilets is increasing as well. Generally, more toilets are appearing in Agincourt HDSS of various types.

## 2.2 Water.

### 2.2.1 Source of Water

Table 2.3 shows the changes in the source of water within Kildare B village.

**Table 2.3:** Change in source of water in Kildare B village, 2001-2014

Year	Total households	Tap in Street	Cement well	Tap in Yard	Tap in House	Truck	Traditional well	Other
2001	813	713	4	92	2	1	0	1
2007	933	819	1	104	1	7	1	0
2014	857	857	0	83	3	264	0	0

Figure 2.5 and 2.6 shows this data in percentages, not numbers. Data is given for 2001-2014. Data is shown for Kildare B village and Agincourt HDSS.

**Figure 2.5:** Change in source of water in Kildare B village, 2001-2014

**Figure 2.6:** Change in source of water in whole Agincourt HDSS, 2001-2014

## 2.2.2 Availability of Water

Table 2.4 shows the change in availability of water in Kildare B. The table shows data for the years 2001, 2007 and 2014.

**Table 2.4:** Change in water availability Kildare B village, 2001-2014

Year	Total households	Irregular, not every day	Most of the time	Always	Few Hours a Day	Very irregular	Unknown
2001	813	120	666	21	5	1	0
2007	933	430	206	8	34	253	2
2014	857	553	281	6	16	1	0

Figures 2.7 and 2.8 show this data in percentages, not numbers. The availability of water in Kildare B village can be compared to the availability of water in the entire Agincourt HDSS.

**Figure 2.7:** Change in availability of water in Kildare B village, 2001-2014

**Figure 2.8:** Change in availability of water in whole Agincourt HDSS, 2001-2014

**Take home message:** The source of water in Kildare B village has changed since 2001. Since 2001, the percent of taps in the street has decreased. The percent of taps in yards has increased in Agincourt HDSS, but the percent of taps in streets has decreased. The availability of water in both Kildare B village and Agincourt HDSS has become more irregular since the year of 2001. This means that there is no guarantee that there will be access to water on any given day.
